TITLE: Highly damping rubber compsn. - contg. e.g.
styrene-butadiene rubber
and carbon black

PATENT-ASSIGNEE: TOYO RUBBER IND CO LTD[TOYF]

PRIORITY-DATA: 1989JP-0130694 (May 23, 1989)

ABSTRACTED-PUB-NO: JP02308835A

BASIC-ABSTRACT: Rubber compsn. comprises a rubber component and carbon black, where (a) content of styrene-butadiene-rubber which contains bonded styrene is 10-52% and mol.wt. is 5×10^3 - 2×10^5 , (b) content of carbon black is 15-50 pts.wt. (whose iodine adsorbing specific surface area (IA) is 20-100 mg/g and DBP value is 50-120 cm³) per 100 of the rubber compsn., and (c)

tan-delta of the compsn. is at least 0.25.

The rubber component is pref. a low mol.wt. rubber . Crosslinked segment and uncrosslinked segment can be supplemented by the admixed presence of rubber components which gives high damping and vibration proofness.

ADVANTAGE - Prod. requires no dampers, giving reduced work period and cost.

Prod. gives high loss characteristics without impairing the low

creep
characteristics, low temp. dependency, and resistance to damage.
